

Powder Mill

Comil Powder Mill

Powder Mill Description

This Comil Powder Mill is supplied by Ytron Quadro and includes a hand operated lifting system which raises and lowers the milling head as required. The Powder Mill was mobile on castors and was manufactured from Grade 304 and 316 Stainless Steel. The electrical control system incorporated an inverter to provide adjustment of the milling speed, together with a safety system that would not permit access to the milling head when it was running. All of the electrical equipment was mounted in an IP65 rated enclosure.

Ytron-Quadro Comil Powder Mill

Powder Mill Application Story

The Milling System is used to mill powders to a very fine particle size and has numerous applications in both the Food and Pharmaceutical Manufacturing Industries.
